Second we need to make our.rar a.zip file. Here I have used winrar. Second step is to make the folder(in the android) that contains the rar file. Third step is to make a.txt file of the form (pseudo code) score = rand(100,1000)//this is the number 100 to 1000. The main objective is to extract the file in to the folder and replace the original file with the extracted file. My script for this is as follows import zipfile import os import json import subprocess zip_data = zipfile.ZipFile('link to the rar file.rar','r') zinfo = zip_data.infolist() for zipinfo in zip_data: for ent in zipinfo.infolist(): if ent.filename.startswith(".R00",): with open(".R00",'w') as f: f.write(zipinfo.filename + ' ') f.close() I am new to Android as well as Python scripting. Though i can see how to extract the.rar file using the zip module in python. Could anyone help me with the step 4. Thank you A: Here is a working script to extract the files from a file called "RAR" that is a.rar file: import os import zipfile import json import subprocess # this is the path to the folder folder = '/storage/emulated/0/dev/' # remove the original files #if [-d \$folder] ; then #if [-f \$folder/*.rar]; then #for i in \$folder/*.rar; do # echo \$i # 3ef4e8ef8d
