About Us

WebTool is a SaaS platform for online exposure management and content marketing. We now support a vast number of advertisers all around the world in conducting their work more efficiently and achieving excellent performance.

Our software now supports enterprises of all sizes and markets in growing their exposure through key platforms and producing compelling content for their consumers. Our data allows the detection of major growth prospects, while workflow and monitoring solutions allow users to conduct tests on a continuous basis and more specifically track performance.

Tf_IDF Checker

Tf_IDF also known as term frequency-inverse document frequency. In SEO, tf_idf help to find synonyms of all-important keywords which are mostly used in documents and then apply tf_idf on those words in the document.

Tf_IDF Checker

Since TF-IDF is all about checking keywords term frequency & inverse term frequency within the context of the page. Thereafter, it have no ideal figure.

WEB TOOL

Tf_IDF Checker

We first compute the "bag of words" of the given landing page
After that we pick top 10 search terms which have the highest weight in corpus (Frequency)
Then we find tf_idf terms of landing page and competitor page
Then filter only those terms which are not present in landing page.
