WEB TOOL

It's necessary to identifying strengths, weaknesses and potentials of your website for long-term success. Audits improve Google search ranking while increasing site traffic and performance.

WEB TOOL

Website audit is one of the major feature in webtool. In webtool easily crawl website just input the number of pages. Webtool is a first tool where user can provide how many pages they want to crawl.

Not only crawl also retrieve the result very easily by just clicking download result. But after the crawling lots of issues & errors can occur for a particular website. Those errors or issues fully depends on using website functionalities or behaviour of a website.

Also webtool provide recommendations as per issues or errors. As an example if in a website have missing titles then should add title on those missing pages or if a website have broken pages present then needs to redirect or remove those pages from the website.
