Data Communications and Networking Forouzan 2nd Edition.pdf ISBN 9780732322063 : 0072322063 : 0128187460 : 20 December 2014.. Author Behrouz Forouzan. Data Communications And Networking Forouzan 2nd Edition.pdf forouzan, behrouz a 1. Field of the Invention The present invention relates to a method and system for subsea production of oil and gas. More particularly, the present invention relates to a method and system for pumping produced fluids to the surface using a variable-speed pump in conjunction with a dual-flow wellbore. 2. Description of Related Art Fluid from a subsea hydrocarbon reservoir is typically recovered using a wellbore having a production tubing disposed therein. The production tubing includes a vertical portion extending from the reservoir to the surface, and a horizontal portion extending from the surface to a downhole pump. The pump is typically disposed at the wellhead, or just above the wellhead. The pump is sized to produce sufficient fluid to provide sufficient pressure to bring the fluid to the surface. Efficient operation of the pump requires the wellhead and pump to be operated at a constant speed. Operation of the pump at less than optimum speeds can result in significant energy losses, excessive wear and tear on the pump, and excessive heat generation. Operation at greater than optimum speeds can damage the pump. Additionally, operation of the pump at less than optimum speeds can result in significant amounts of fluid being returned to the reservoir after production. Operating the wellhead and the pump at less than optimum speeds can also result in excessive heat being generated. Production fluid is typically produced at a temperature greater than the temperature of the surrounding environment. The increased temperature of the production fluid is caused by heat losses to the environment, internal friction losses in the well, and friction between the production fluid and the fluid path through which the production fluid is

It will open the door to a new era of productivity. The era of low-cost, intuitive, and energy-efficient labor, known as a no-hands era. But can't wait for the no-hands era? What can we do? This site contains various information about the no-hands era. Editor's notes : "No-hands" means not having to touch the body of the host. "No-hands" is not necessarily "without hands." "No-hands" is not necessarily "withoutTechnology." "No-hands" is not necessarily "hands-free." "No-hands" is not necessarily "hands-on." No-hands No-hands No-hands What 2d92ce491b
