Oracle Data Wizard - Creating a Macro General Information Oracle Data Wizard - Creating a Macro (Macro tool) is an easy-to-use Windows graphical utility that allows you to create a database macro. A macro is a set of commands (SQL statements) that you can execute in Oracle at runtime to perform specific database operations without having to write a program or a procedure to do the same. In fact, you can perform these operations using the Oracle Data Wizard in a graphical interface, without needing to program at all. Here are some of the features you can get from Oracle Data Wizard for Creating a Macro. Create a database macro. Create a macro stored in a database. Modify the parameters of the database macro. Edit, delete, or add macro definitions. Create a macro stored in a file. Add new macro definitions. Edit, delete, or add macro definitions. Create a macro. Oracle Data Wizard allows you to create a database macro which consists of macro definitions and macro parameters. You can also specify the macro language used in the definition. Before you start using Oracle Data Wizard for Creating a Macro, make sure that the database you want to use in the macro has been created using Oracle Data Wizard. Create a database macro After installing the Oracle Data Wizard for Creating a Macro, you can start using it to create a database macro for any database that you have created using Oracle Data Wizard, even if it is a different version of Oracle Database than the version used in the wizard to create the macro. In the Create a Database Macro dialog, select the database that you want to create a macro for. You can choose a macro stored in a file and a macro stored in a database. Select the macro language used in the definition. Select a database macro created by the wizard and use it in the same way as you would do using the wizard. Use the saved macro to perform the required database operations. Save the database macro in a file. You can save the database macro in a file to use it in the future. Copy the database macro to use it in the same way as you would do using the wizard. You can copy the database macro to use it in the same way as you would do using the wizard. You can also choose to create a macro stored in a database. Create a macro
