
Ever wanted to be able to set your desktop background from the command line? With KEYMACRO you can! KEYMACRO is a simple desktop application that gives you access to Unsplash, a cool site where you can get creative images to use as your desktop background. Your wallpapers are all in one convenient spot, and you can find pictures with interesting titles, categories and tags. All you have to do is type in the image you want to use, choose the directory you want to save it in, and you're ready to go! Home and outdoor photography sites are filled with gorgeous photos, but they're all pretty much the same as far as your desktop wallpaper is concerned. You can find the photos you want on sites like Unsplash, but they're usually hard to find, and there's no good way to search for them or set them as desktop wallpaper. That's where Splashify comes in. The desktop application allows you to view pictures on Unsplash, categorize them according to their content, and even set them as your desktop background. Vault / No vault / Home I really liked the app. A good idea and the developers put in a lot of effort to get this app working smoothly. The users app development has been my experience that the developers consider the needs of their users and aim to provide solutions. A rare thing, especially for Apple products. However, the only problem that I've experienced with this app is that when you set the wallpaper it appears on your wallpaper screen but not on your background. Some sort of lag or lack of response? And I have one other question; where did the developers get the green curtains for the app icons? I mean, they look great, but was there a way to make them fit the icons better? I think these are my two main concerns. Overall, this app has potential to be great and could really be a lot of fun, if only they could fix the 2 problems mentioned above. 5 stars splashify app is great! I recently downloaded it as i wanted to make it my background and it works great. My only issue is i can only set it as my background one time. For some reason after i set it as my desktop background and change my wallpaper, splashify wont open. This only started happening a few weeks ago. If someone could help me figure out why this is happening and how 70238732e0
