The story revolves around Karan, an Indian army commando, . Jun 12, 2013 John Matrix is a retired Army Colonel who went UP against some. He learns That Bennet one of his men whom he thought was killed is . Ionising radiation induces DNA damage and cell death by directly ionising DNA in its primary targets or by inducing cell

death in nearby cells. Cancer cells that carry genetic mutations, such as mutant p53, are particularly susceptible to radiation therapy due to the fact that these cells do not suffer cell death if not irradiated, resulting in a higher chance of survival. Most cancer cells are mutated and mutant p53 is a hallmark of cancer. However, many normal cells also carry mutant p53 which is not associated with cancer. But, cancer therapy by ionising radiation induces damage in normal cells in addition to cancer cells. Normal cells can be irradiated by low doses of radiation to which, in the absence of additional genetic or epigenetic changes, they are sensitized. Thus, normal cells that are irradiated with low doses of radiation display an increased chance of transformation, which results in induction of genetic or epigenetic changes that result in tumour growth. Therefore, low doses of radiation may lead to both tumour suppression and carcinogenesis, a phenomenon known as radiation hormesis. It has been suggested that the increased risk of lung cancer following low-dose radiation exposure is due to
