The new features in the workstation include the Vue Native for OSX package, which provides cross platform desktop applications and runtimes. Vue is capable of running on OSX, Windows, and Linux. It utilizes browser-based technologies that are currently supported by browsers such as Chrome, Firefox, and Safari. Vue Native for OSX would allow developers to use a single solution for all their projects. The second update was a preview of the Paracode Editor. This editor allows developers to code in a live environment which shares the web-based IDE across multiple machines. It supports easy code reuse, collaborative coding and debugging, which eliminates the need to work across different machines while writing and executing code. It also offers HTML and JavaScript editors that can be used as a standalone web editor. The third feature update included a preview of Vulcan, a next generation language for data science. This language provides a modern syntax for data analysts to perform more complex data analysis tasks without the need to use a programming language.
