I was able to add a PSCredential using the -Credential $Credential property to work around a CredentialProvider issue that they were having. However, I noticed that with this property, the -ErrorAction parameter is no longer effective. Here is a simplified version of the script. # Set up some credentials $Credential = Get-Credential # Create the path $scriptPath = [IO.Path]::GetDirectoryName($MyInvocation.MyCommand.Definition) $scriptPath = "$scriptPath\scripts" $scriptName = $MyInvocation.MyCommand.Name # Enable the logging feature so I can see where the script is going $scriptPath = $scriptPath + $scriptName $log = New-Object -TypeName System.Diagnostics.FileLogger -Property @{ Path = $scriptPath; Verbosity = [Diagnostics.TraceLevel]::Verbose } $log.WriteLine("Starting script `" + $scriptName + "`") # Enable logging $scriptPath = $scriptPath + "Debug.log" # Uncomment the line below to allow the debug script to stop the host process.

Operate with photoshop style windows and edit macros in the command line. KEYMACRO provides support for scripts, macros, and functions in the shell and cmd. It also provides environment variables and functions in the Windows environment. KEYMACRO is used to create macro keys, macro lists, keyboard mappings, and to execute macros from the command line. See for more details. Date Added 27 Jan 2014 Steps to Install the Macros: 1. Open a command line shell and install the KeyMacro maco with: wget 2. Zip the entire folder. 3. Move the content of the zip file to the macros directory (Macros->Mao->Customize->Customize....->Macros->Select keymacro folder->Add to path). 4. Open a command line shell with an Administrator account and execute the macro generator with: java -jar macro.jar 5. Open another command line shell with an Administrator account and execute the macro generator with: java -jar macro.jar 6. All the macros will be created in the current directory. This is a very simple macro to start off with. There are many more useful ones that you can find on the web. For example, I have a macro to remove all the comments from a text file. Edit Macro * Add Macro * 1. Choose a directory to save macros to. 2. Click "Add Macros" (or press [Ctrl]+[A]). 3. Choose a directory to save macros to. 4. Select the menu item of the macro you would like to create. 5. In the Macro menu select the menu item you want the macro to execute. 6. Click "Save". 7. Enter a name for the macro and click "Save". * Delete Macros * 1. Click on "Delete Macros" (or press [Ctrl]+[D]). 2. Select the menu item of the macro you want to delete. 3. Click "Delete". Please note: After you delete a macro, you can run it by right clicking on it in the list. Well, nothing 77a5ca646e
