
FC_RTGraph Crack Activation Code With Keygen [Latest] 2022

FC_RTGraph Crack + With Full Keygen For Windows

FC_RTGraph is a tool that allows you to collect and graph information from SNMP devices. FC_RTGraph takes an XML formatted config file as input. FC_RTGraph is an excellent tool for real-time monitoring. Collected SNMP data can be graphed in highly customizable 3D graphs (Bar, Area, Line, 3D). FC_RTGraph supports SNMPv1 + SNMPv2. FC_RTGraph can be started from the commandline or through a shortcut on the desktop. You have the freedom to specify the name and location of the config xml file using the /xml commandline switch. Limitations: · Only supports the SNMP rfc1213 OIDs · Does not support SNMPv3 · Doesn't do anything with Windows 8 machines · May suffer from random "hang" · Doesn't support client side SNMP configuration FC_SNMP_Plugin for SNMP/v1 and SNMP/v2 supports the SNMP standard and management protocol. It provides an XML-based configuration file that can be used to read SNMP data from the Windows Event Log, Active Directory, Microsoft MSMQ, or the Oracle SQL database. With FC_SNMP_Plugin you can collect, analyze and graph a variety of SNMP information, such as the current Windows Event Log, Active Directory, Microsoft MSMQ, or the Oracle SQL database. Functionality: · Read data from the Windows Event Log · Read data from the Active Directory · Read data from Microsoft MSMQ · Read data from the Oracle SQL database · Read data from the Windows registry · View, analyze and manipulate data from SNMP OID tree · Read and write the SNMP protocol settings · Read and write SNMP response codes · Graph SNMP data as a 3D or 2D graph · Collect SNMP data from multiple devices · Collect SNMP data from multiple hosts · Export SNMP data to Excel · Monitor changes in SNMP data, including when a rule is met or an event log entry is generated · Run SQL queries against the SNMP data · Distribute SNMP data to multiple devices · Access SNMP data from multiple devices · Resolve OID paths to real device names · Resolve OID paths to real SNMP devices · Resolve OID paths to real process names · Restrict access to SNMP data

What's New in the FC_RTGraph?

This program is designed to collect SNMP statistics (Counter) from a number of SNMP devices. The statistics can then be graphed using a 3D surface plot. The SNMP Device is the target device, ie. the device to which data is to be collected. This is useful in network/environment monitoring. The device name can be a wildcard. The device name can be a combination of SNMP devices in the same network. A number of SNMP counters can be monitored. The statistics can be saved to a file for further graphing. The required xml file can be specified using the -c switch. Version: This program version is the date of release, ie. release date. Current version is 1.0.0 Usage: FC_RTGraph can be started from the commandline using the /xml commandline switch. For example, to start FC_RTGraph with the device wildcard '*.test' and the directory wildcard '*' from the current working directory: ./FC_RTGraph.exe -xml /xmlpath -c SNMP/Counters/SNMP/MIB/Wireless.xml -s *.test -d * Or to start FC_RTGraph with a wildcard device and a directory wildcard, from the current working directory: ./FC_RTGraph.exe -xml /xmlpath -c SNMP/Counters/SNMP/MIB/Wireless.xml -s test*. -d * Notes: The SNMP OID for Counters is MIBS/Wireless/WirelessEntry/wirelessEntry." The device wildcard can be a combination of *.test, ie. *.test.* Author: Mark Brown (C,C++,SQL,Shell) Web: Changes: 1.0.0 Initial Release * First public release. * Added real-time SNMP statistics monitoring. * Added new bar graph options. * Added new area graph options. * Added new line graph options. * Added new 3d surface plot options. * Added a tool to display the collected SNMP statistics. * Added a tool to save the collected SNMP statistics to a file. * Added new switches for using a wildcard SNMP device. * Added new switches for using a directory wildcard. * Added new switches for specifying a wildcard for each SNMP counter. * Added a switch for graph resolution. * Added a switch for outputting in XML format. Revision History: v1.0

System Requirements For FC_RTGraph:

Minimum: OS: Windows 7 Processor: Intel® Core™2 Duo, 2.66 GHz Memory: 2 GB RAM Graphics: Intel® GMA 950
DirectX: Version 9.0c Network: Broadband internet connection Recommended: Processor: Intel® Core™ i7 or AMD Athlon™
64 X2, 3.0 GHz or faster Memory: 6 GB RAM Graphics: Nvidia® GeForce® GTX 560 / ATI Radeon™ HD 58
