It's not because it's not a great camera -- it is. It's just that it's a little cumbersome to use in video because it's not a compact size camera. Why You Should Buy It: * Fast sensor: The X100F uses a fast 16-megapixel full-frame sensor. It's one of the few cameras that allow you to shoot 1080p video in lower frame rates up to 60 fps. * Great value: At \$1,099 you can't go wrong for the price. * Incredible images: Sony produces incredible images with its professional cameras, and the X100F is no different. * Amazing image quality: The X100F is a great camera for video. It shoots amazingly detailed and crisp still images in addition to video. * Handy size: This camera is very portable, making it great for travel. It's not huge, but it's also not small. You get all the camera's great features in a camera that's easy to hold and operate. * Full-featured: The camera comes with a wide array of features, from a 3.2-inch LCD screen to HDMI out, USB and SD card slots. Plus, the camera has a variety of ISO settings ranging from ISO 100 up to ISO 25600. Key Features: * Wide dynamic range: The X100F features an amazingly wide dynamic range for video, ranging from ISO 100 all the way up to ISO 25600. If you plan to shoot night or low light video, this is a great feature. * Great auto modes: The X100F features 11 different auto modes, including P, S, A, and M modes. With so many different options, you can find the mode that best suits your shooting style

KeyMacro allows you to edit the format of a Sony file by assigning it a macro that you can use to quickly perform many actions. KeyMacro works on DV, JVC, Mino, and Phase One cameras, and is particularly useful for easily editing a lot of raw files from different camera models and stored on different memory cards. Video styles: The video styles available in KeyMacro include: landscape, portrait, square, square cropped, and square trim. You can adjust these styles directly in the KeyMacro file or apply them via the KeyMacro selection list. In the clip details, you can see a timeline where you can see the style applied and the keyframes applied to each clip in the sequence. You can also use a frame counter to see the keyframes applied. Clip copy: You can copy a single clip or a selection of clips from one place in the timeline to another. You can also copy a clip to multiple destinations by using the Copy to command, which is available for all clip types. You can paste a clip from KeyMacro back into the original clip or to another clip. You can also paste a clip into the clip menu (or a different clip) so that the clip's file name is the same as that of the original clip. If you copy a clip to multiple places in the timeline, KeyMacro prompts you for the number of copies you want to make. Clip deletes: You can delete a clip or a selection of clips from the timeline by using the Delete command. You can delete a single clip or multiple clips at the same time. You can also use the Clear command to delete the keyframes of all clips on the timeline. You can use the Delete sub-menu in the clip menu to delete a clip. Trim: You can trim a clip by using the Trim command. Trimming is available for all clip types. If you select multiple clips in the Clip menu, Trim lets you choose the clips you want to use. You can adjust the start and end time of the clips that you trim with the keyboard. Position: You can position a clip within the timeline by using the Position command. You can drag a clip to a new position. You can also go to a specific position using a keyframe. Location: You can select a clip for placing by using the Location command. You can drag a clip from the Clip menu to its current location in the timeline. You can also 1d6a3396d6

What's New In?

Sony has developed a production application that was created with a single goal in mind: to take any type of video (HD or SD, RAW or compressed) and turn it into a high-quality movie. And in order to keep up with such an ambitious goal, we have included powerful media organizing tools, smartly organized production tools, excellent editing tools, easy-to-use color correction tools and a ton of effects. So let's see how to use these tools to create stunning videos and improve them after the production. A well-organized studio: Organize media with Catalyst Prepare As a professional video editor, you know that when you organize media files and organize them well, they will help you make a well-thought-out movie. And that is exactly the point of Catalyst Prepare, the pre-production tool that aims to organize your raw footage and create bins for each type of footage, allowing you to create a storyboard easily. For instance, you can create bins for clips based on their resolution (640 x 480, 1280 x 720, etc.), size (4:3, 16:9, etc.), codec (RAW, MOV, etc.), or any other criterion that you feel is relevant. Catalyst Prepare offers several very useful features that will certainly help you to organize your media content. A common mistake when organizing media files is trying to organize them chronologically. Don't do that, because there is no guarantee that footage shot at different dates will be organized in the same way. It's always better to organize media files by event, by city, by type of footage, or by any other relevant criterion. After you organize your media content, you can open the media library and start selecting and organizing your footage. Catalyst Prepare will automatically search for compatible media content. If you need to edit RAW footage, you can click on an option to tell Catalyst Prepare which codec it should use to open the footage. If you shoot a lot of videos on your Sony RX1, you can set it as the default codec. When you have selected the most appropriate codec to use, Catalyst Prepare will open the footage and organize it according to your criteria. After organizing your footage, you can create bins, or folders. You can create a bin or folder by clicking on the Create Bin or Create Folder button. Simply insert the name of the bin or folder and select its type and resolution. After you have created the bin or folder, you can navigate to it using the Media Viewer. There are two main types of video clips that you will shoot with your camera: raw footage and videos. Raw footage is the raw data that your camera captures and stores, while a video is a file that has already been encoded in a certain format, so it can be played back easily. When you organize your media content with Catalyst Prepare, you can select the type of footage you shoot
