

Warehousing Services

CROSS-DOCK WAREHOUSE

Cross-dock, a trucking affair to accelerate shipments to retail chains with minimal handling. It directly moves cargo from manufacturers to the hands of the supply chains to make the next move. It involves the transfer of the goods from the inbound trailer to the outbound trailer. In cross-docking terminals, companies will initially receive your shipments, then sort for the further shipment. You do not need to store the products, so it would cut your warehousing cost. Ott trucking facilitates a smooth Cross-dock warehouse process for supply chain management that provides more satisfaction to customers.

Benefits Of Warehousing

OTT Transportation Services is a privately-owned trucking and freight forwarding company in Surrey, Vancouver, BC-Canada.
