

SOME IMPORTANT TREE REMOVAL GUIDES AND TIPS

Tree maintenance is a list of tasks that need to be performed on a system.

The tasks are broken up into smaller chunks, and each chunk is assigned to a specific person or team.

The tree helps you keep track of the tasks and make sure they're being done in the right order.

You should immediately hire a professional to remove your tree if you see these signs :

- **Decay-producing fungi growing at the trunk's base, such as mushrooms**
- **Peeling off the bark**
- **Heaving soil at the trunk's base**
- **Cracks in the tree trunks**

Overall, if you notice any signs that show that the tree is diseased or rotting, you need to get the tree removed before it causes any further damage.
