

Problem/PICOT/Evidence (PPE) Worksheet

NR439 Week 3 assignment includes completing the PICOT Evidence Worksheet and selecting and writing a Clinical PICOT question. Refer to the [online custom writing services](#) for Writing Questions and Examples located in the assignment guidelines to identify a nursing practice problem/issue that you can investigate through research. Complete the PICOT Evidence Worksheet and submit it on the Assignment page.

NR439 Week 3 Discussion and Assignment

This assignment provides a learning activity for students to experience a practice scenario, apply a process worksheet designed to assist in the identification of an independent nursing problem/concern, develop a clinical question, and search for evidence using a credible online database. The assignment also enables students to examine the sources of evidence that contribute to professional nursing practice as outlined by both AACN and QSEN.

Identify one quality or safety clinical priority area from the assignment practice scenario. Write a clinical nursing PICOT question, using the NR439 Guide for Writing PICOT Questions and Examples located in the assignment guidelines, addressing the selected quality or safety clinical priority area. Include the PICOT letters in your question. For example: Does providing dialysis patients with more comfortable chairs, better TV's, and allowing them to bring snacks improve patient satisfaction compared to current practices? (PICOT) (I) (O) (C).

Practice Scenario

In this article, [Professional Paper worksheet assignment](#) that nurses can translate research evidence into practice. We will then choose one of the articles you found in your RRL assignment and answer a few discussion questions.

Nurses are busy professionals who often struggle to find the time to engage in EBP. In addition to this, current and projected shortages of nursing staff make it even more challenging for nurses to engage in EBP (Houser, 2018). Consequently, it is important for nurses to find effective ways to manage their time and engage in evidence-based practice when possible. To help address this, nurses must develop a system for efficiently searching and reviewing evidence for their clinical practice. This includes developing a method to identify an independent nursing problem or concern, developing a PICOT question, and searching for credible information about the problem using online resources.

PICOT Question

The PICOT question is an important part of the nursing process and allows nurses to ask questions about what may be the best practice to improve patient outcomes. To create a meaningful research question, several considerations must be taken into account. These include the type of patients to be included in the study, how detailed the

literature search should be, and what the research design should look like (e.g., a systematic review versus a randomized controlled trial).

Identify [NR439 Week 3](#) clinical priority area from the practice scenario provided in the assignment guidelines and write your PICOT question. Use the instructor feedback from your Week 2 Check-In to guide your writing. Using the NR439 Guide for Writing PICOT Questions and Examples located in the assignment guidelines, clearly define each of the PICOT elements. Example: Would providing dialysis patients with better chairs, comfortable TV 's, and more snacks improve patient satisfaction when compared to current dialysis clinic practices over 6 months?

Evidence Search

After your research is complete and the data have been analyzed, you must translate the results of your research into your nursing practice. This final step involves reviewing information you found on your nursing clinical issue and describing ways in which the information would be shared with the healthcare team.

For this week's discussion, you will review several different research designs. Identify the most appropriate research design for your PICOT question and discuss the reasons why you chose that particular design.

In addition, [NR 447 Week 3 Conflict Resolution Paper](#) terms and strategies that will help you narrow your search for evidence for your PICOT question. Once you have completed these discussions, use the form below to complete your NR439 Week 3 PICOT Evidence Worksheet assignment.
