Static Mixers

Finepac has excelled in the field of Static mixing for more than 20 years and has built up a reputation as an international supplier of top quality mixers. Over the years we have achieved comprehensive technical expertise in the field of static mixing to enable us to provide you the best mixer for your application.

Delivering Performance by Design

At Finepac we have a strong belief that maximum performance in a process can only be achieved with the right design. Owing to our vast experience and technical expertise in the field of mixing technology we carefully consider the parameters and pre-conditions before developing the best mixer to suit your application.

Static Mixers are highly engineered motionless mixing devices that allow for the continuous blending of fluids within a pipeline. With no moving parts, static mixers utilize the energy of the flow stream to generate consistent, cost-effective, and reliable mixing performance.

Our mixers are developed keeping the customer requirements under consideration so as to ensure that what we deliver is exactly according to your needs. As a result we deliver highly efficient static mixers that link 100% to the process with an energy saving, sustainable and a maintenance free technology.

Finepac Static Mixing Technology

Finepac is your reliable and experienced partner for all of your static mixing requirements.

We provide a variety of mixing solutions for refineries, oil and gas, chemical and food processing industries. You benefit from our know-how when you require mixers for high viscous mixing and dispersing, gas liquid contacting, scrubbing etc.

Benefits of a Finepac Static Mixer

Maintenance-Free

Finepac Static Mixers are built to last using industrial grade materials specifically tailored to your application.

No Moving Parts

Unlike traditional mixers, static mixers remain motionless during the mixing process.

Quick Delivery

Finepac maintains complete control over its production process. All static mixers are built in-house at Finepac's manufacturing facility outside Chicago and can be manufactured to meet your project schedule.

Low-Cost

Finepac Static Mixers are a low-cost alternative to traditional tank mixers both at purchase and during the mixer's lifetime. There are no running costs associated with operating a Finepac Static Mixer on top of running your existing pipeline.

Custom-Designed for Your Application

All Finepac Static mixers can be custom-tailored to fit your requirements.

Low Energy Requirements

Because static mixers are motionless by design, all the energy required to provide a perfect blend is provided by the energy of the flow stream.
