

# Microsoft Office error code 30174-4 (1) in windows

Windows Error Code 0x80070026 is common for all the Windows Operating systems when you try to install the updates. It usually appears when Windows 10 or Windows 7 update system is broken or there are network related issues and concerns. This can be a result of malware infection or file corruption. Another cause of this error is if Windows Update fails to function properly.

## Reasons for the Windows Error Code 0x80070026:

Usual causes for this error code are communication failure over the Internet with Microsoft update servers.

## Troubleshooting Steps:

Disable the proxy Internet connection and try again to install the update.

The Procedure to Disable the Proxy Connection is as Follows:

1. Firstly, open Internet Explorer and click on Tools->Internet Options
2. Secondly, go to Connections and LAN Settings
3. Finally, check to make sure the Proxy server is disabled.

Second case would be with your Antivirus. There are proxy settings enabled under your settings of any security programs that you may be using. If you cannot find the procedure to stop it, you can ask our techs on chat support to guide you.

Repair the Windows Update Services to Fix this Error Code:

There are failed windows update services that could also cause you this error 0x80070026 while updating Windows.

## Try the Below Steps to Repair Windows Services:

Repairing [Windows update services](#) is not possible like you repair any windows apps from the add/remove programs. There is a procedure that you need to follow through command lines.

Simultaneously, this requires the user to have administrator rights on his computer. As per the Microsoft set of rules defined on various Knowledge base articles, the steps are simplified as mentioned here to reset your windows update services.

NOTE:

Following these steps carefully will not make any changes to your personal data or programs. It will only reset the Windows update services
