

Cricut Design Space Download Mac: Full Guide for Beginners

Do you want to learn the process for [Cricut Design Space download Mac](#)? It is important to use the Cricut app on your desktop computer. If you are interested in learning how to download and install the software and set up your Cricut machine on your Mac computer, keep reading the post until the end.

As a Mac computer and Cricut user myself, I am going to write down the basic instructions in this blog to help you easily download the Design Space app. You will also learn about the minimum system requirements for your Mac operating system, how you can create a Cricut ID, and why having an account is necessary.

Step 1: System Requirements for Cricut Design Space

Before you go for the [Cricut Design Space download Mac](#), you should know the specifications your computer is going to need to be able to download the app properly. A MacBook is definitely compatible with the software, but it still has to have certain things to run it. Here are those features:

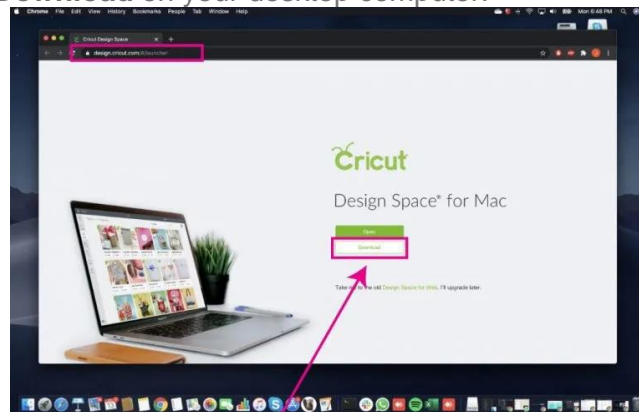

- Your MacBook has to be a macOS 11 or later version of the computer.
- Its CPU should be at least 1.83 GHz.
- The computer should have at least 4 GB RAM.
- It should have 2Gb free disk space.
- When connecting the computer to your machine, it should have a USB cord or an available Bluetooth connection.
- In order to use the software on the computer screen, its resolution should be at least 1024 x 768 px.
- The computer should have a good internet connection for downloading and uploading the images. The connection should be a minimum of 2-3 Mbps for downloading and a minimum of 1-2 Mbps for uploading.
- Memory space for the computer will depend on your uses.

Step 2: Cricut Design Space Download Mac

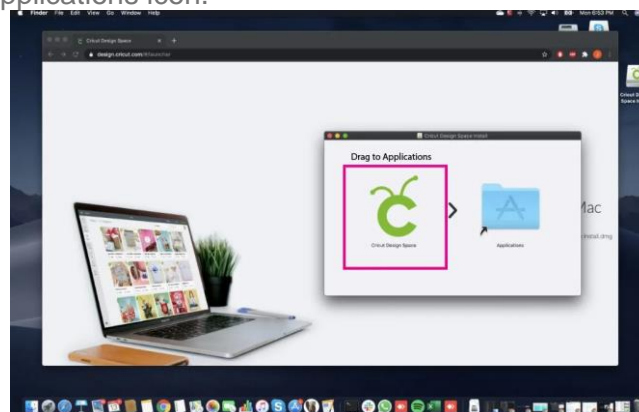

When you have figured out your computer's system requirements and make sure it is compatible with the software, you can download the app. The process for downloading and installing it is in the section below:

1. In the beginning, you should open the computer and then a browser.

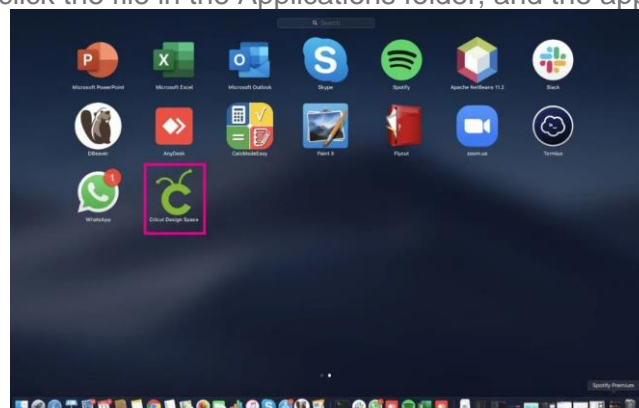

- Next, navigate through cricut.com/setup and tick the box in agreement with **Cricut Terms & Privacy Policy**.
- Then, select **Download** on your desktop computer.

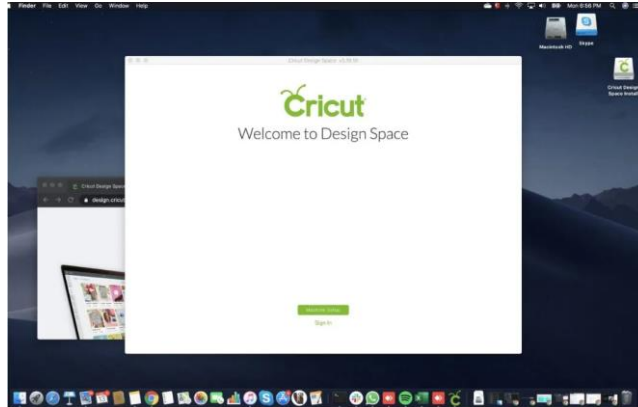

- After that, you can choose the destination for the file to be downloaded. By default, it will start automatically downloading to the Downloads folder.
- Once the app is downloaded, visit the folder and double-click the file.
- A new Cricut window with two icons will appear on the screen. You have to drag the Cricut icon into the Applications icon.

- Now, double-click the file in the Applications folder, and the app will be launched.

8. When the app is installed on your MacBook, you have to log in with your Cricut credentials.

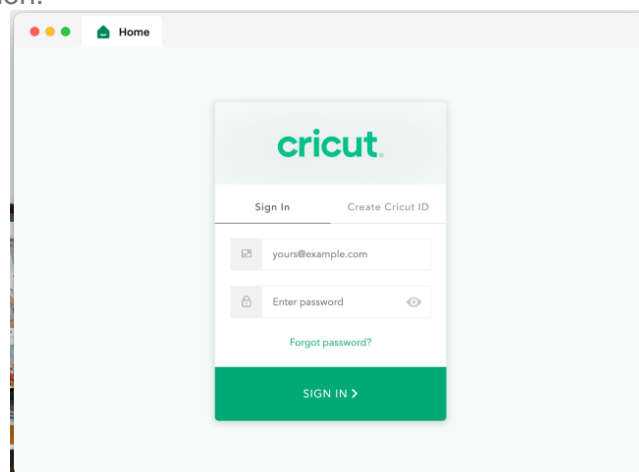

9. If you are a new user and do not have an account, you will have to create one.

Step 3: Creating a Cricut Account ID

Once the **Cricut Design Space download Mac** is complete on your device, you will need to log in with your username and password. If you do not already have an account, you must create one.

1. To start creating an account, open the Design Space app and click on the **Create a Cricut ID** option.

2. Then, you will see a few empty columns. You have to fill in your name, email address, and your country of origin.
3. After that, you have to agree to the **Cricut Terms and Conditions**.
4. When you have filled in all the necessary details, tap on **Create a Cricut ID**.
5. Now, continue with the process on the screen and finish creating the account.
6. Lastly, remember the email address and password for further use.

Conclusion

To conclude the blog, I would say you must know the process for the [Cricut Design Space download Mac](#) in order to use your Cricut machine on a MacBook. The Design Space is an essential part; without this app, you simply can't use the machine. It helps you use Cricut machines in many ways. You need the app to use the machine on your computer. Also, you need the app to choose or create any design to cut on the Cricut machine.

FAQs

Why Is My Cricut Design Space Not Opening on Mac?

If you are having difficulty opening the Cricut app on your device, then you should check a couple of things. The first thing to check is whether your device is compatible or not. If it is not, then you will have to use a device that works with the software. Next, you have to make sure that you are using updated software. If you are using an older version of the app, you must update it. A poor internet connection may also be a reason the app is not working. Make sure you have a good and stable internet connection.

How Can I Connect Cricut to My Mac?

In case you have a Mac computer, you will need to connect it to your machine in order to work with it. Here is how to connect Cricut to your system.

1. To start, press the **power** button and turn on the machine.
2. Then, go to Bluetooth settings on your computer.
3. After that, turn on the Bluetooth if it is not turned on
4. Now, search for the machine and click on it when you see it.
5. The machine will be connected to the MacBook very soon.

How Can I Use a Cricut Machine on a MacBook?

If you want to use a machine on your MacBook, you will have to set it up. For the setup, you will have to do the following things.

1. Initially, open the machine and put it in a safe place
2. Then, connect it to an electric outlet and turn it on.
3. Next, connect the machine to the MacBook via Bluetooth or USB.
4. Now, go to the computer and download the application.
5. After that, log in with your account, and you are ready to use Cricut.
