

Why choose us - Plant Reliability Services

At the heart of Infinite Uptime is our commitment to your purpose. That is why we have pioneered Diagnostics-as-a-Service offering the following unique features:

Zero Capital Investment

Conventionally, enterprise-wide Condition Monitoring technology has been looked at as expensive. Meaning it can take years before companies realize a return on their investment. This has kept many organizations from investing in Predictive maintenance.

Infinite Uptime's Diagnostics As a Service (DaaS) allows organizations of all sizes to benefit from our predictive technology without the initial investment. It also gives your organization the ability to scale up the predictive maintenance program rapidly and easily in response to technology adoption and operational benefits.

Guarantee of Outcome

Infinite Uptime establishes a Service Level Agreement (SLA) with all its users, guaranteeing precise diagnostics and superior service for improved equipment and process uptime. Currently, it has secured SLAs with more than 500 plants, consistently providing top-tier diagnostic services year after year.

If any user is dissatisfied with Infinite Uptime's DaaS, they can invoke SLA violation and request contract termination. Infinite Uptime will cease services and remove the deployed system at no extra cost to the plant users.
