

The **Zr-P5** grade is an **ultra-fine, high-whiteness zircon powder** and is the **preferred choice for high-gloss and smooth tile glazes** and premium tableware. Using consistent material compositions like Zr-P5 helps English manufacturers reduce glaze defects such as shade variations and pinholes.

The **HL-20** grade is categorized as a granular grade within the HL Series, which comprises custom zirconium silicate grades developed to **balance performance and price**. The HL-20 grade specifically features **21.2% $\text{ZrO}_2 + \text{HfO}_2$, moderate TiO_2 , and higher FeO_2** , making it **ideal for low-cost ceramics, refractories, foundry sand, and general fillers**.
